WORK EXPERIENCE

EITBIZ – Extrovert Information Technology

Feb 2024 – Present

Software Engineer

New Delhi, IN

- Developed reusable and modular UI components in React.js, Next.js, Tailwind CSS, and SCSS to maintain consistent frontend patterns and improve development speed across multiple client projects.
- Built responsive and user-friendly interfaces for dashboards, booking systems, e-commerce flows, and real-time applications with focus on performance, clean UI structure, and cross-browser compatibility.
- Integrated Stripe, Google Pay, Apple Pay, Razorpay, and PayPal payment gateways by coordinating checkout, cart, and order workflows, ensuring secure and reliable payment processing across applications.
- Designed backend architecture and database schemas for scalable web applications using Node.js, Express, PostgreSQL, and MongoDB, optimizing API structure and improving query performance across projects.
- Built and maintained REST APIs, authentication systems, role-based access control, payment integrations, and real-time features using JWT, Socket.IO, Redis, and third-party services.
- Actively handled production issues and application bugs by debugging logs, fixing API failures, optimizing database queries, and resolving frontend issues to maintain system stability and smooth deployments.

PROJECTS

FENFO | Fence Estimation & Business Management | [🔗](#)

- **Real-Time Fence Estimation:** Built a cross-platform fence estimation platform (web and mobile) where users draw fence layouts directly on Google Maps; synchronized drawing state and measurements in real time while automatically calculating material quantities, dimensions, and pricing from map geometry.
- **Business Management System:** Developed quotation, invoice, customer, and order management workflows with automated PDF quote generation, project tracking, and centralized business operations for contractors and teams.
- **Authentication & Payments:** Integrated OAuth login, JWT authentication, role-based access control, and recurring subscription payments using Stripe, PayPal, Google Pay, and Apple Pay for secure account and billing management.

Complex.so | Real-Time Chat & Collaboration Platform | [🔗](#)

- **Real-Time Communication System:** Constructed a scalable real-time chat platform using Node.js and Socket.IO with instant messaging, typing indicators, online presence, read receipts, and message timestamps to ensure seamless communication.
- **Scalable Backend Architecture:** Designed modular PostgreSQL schemas and centralized state management with reactive stores, computed getters, and async workflows for efficient real-time data synchronization.
- **Deployment & Infrastructure:** Containerized services using Docker for production deployment, improving environment consistency, scalability, and backend maintainability across development workflows.

The Dry Factory | E-Commerce Platform | [🔗](#)

- **Full-Stack E-Commerce Platform:** Built a MERN-based e-commerce application for a freeze-dried fruit store featuring product catalog, cart management, checkout flows, and responsive customer-facing shopping experiences.
- **Admin Dashboard & Inventory Management:** Developed a React-based admin dashboard for managing products, inventory, customer orders, and real-time operational workflows with centralized management capabilities.
- **Backend & Payment Integration:** Engineered RESTful Node.js/Express APIs with MongoDB, JWT-based authentication, role-based access control, and Razorpay payment gateway integration; deployed frontend and backend applications on Vercel.

Zembora | Ride & Rescue Platform | Node.js, Express, Firebase, Redis, Socket.IO, PostgreSQL

- **Real-Time Location & Communication:** Spearheaded a driver tracking system using Redis to cache live coordinates with batched PostgreSQL persistence every 30 seconds, significantly reducing database write load; integrated Socket.IO for ride events and Firebase Cloud Messaging for push notifications.
- **Dual-Flow Ride Engine:** Built a unified backend supporting both standard rides and vehicle rescue operations, including SOS emergency workflows routed directly to the admin panel for immediate response handling.
- **Live Ride Sharing:** Implemented ride-sharing functionality allowing users to share live tracking URLs with family and friends, displaying driver location, pickup, and destination details on interactive maps in real time.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Frontend: React.js, Next.js, Vue.js, HTML/CSS, SCSS, Tailwind CSS, Shadcn

Backend: Node.js, Express.js, Nest.js, RestApi, Socket.IO

BaaS & Platforms: Supabase, Firebase

Databases: PostgreSQL, MySQL, MongoDB, Redis

Developer Tools: Git, GitHub, Postman, Swagger

Cloud & DevOps: Docker, GitHub Actions

EDUCATION

Maharshi Dayanand University

August 2019 – June 2023

Bachelor of Technology in Computer Science and Engineering | Percentage: 75.5%

Haryana, India

Govt. Boys Senior Secondary School

April 2017 – May 2018

Class XII – Central Board of Secondary Education | Percentage: 78.5%

Delhi, India
