WORK EXPERIENCE

EITBIZ – Extrovert Information Technology

Feb 2024 – Present

Software Engineer

New Delhi, IN

- Refactored React.js rendering and data-fetching for a high-traffic infinite-scroll feed; **load time dropped from 600ms to under 20ms** with a **20% lift in user engagement**.
- Built a shared component library in React.js, Next.js, Tailwind CSS, and SCSS used across multiple client projects; **cut per-project frontend setup time** and removed duplicate UI code.
- Integrated Stripe, Razorpay, PayPal, Google Pay, and Apple Pay into checkout flows across 5+ apps; **zero critical billing incidents** after go-live.
- Wrote Node.js/Express APIs and designed schemas in PostgreSQL and MongoDB; used compound indexes, aggregation pipelines, and PostGIS to **speed up location-based queries**.
- Added Redis caching and rate limiting to reduce DB pressure under traffic spikes; containerized services with Docker and automated deploys through GitHub Actions.
- Built Socket.IO real-time features and implemented JWT, OAuth 2.0, and Firebase Auth with role-based access control across production apps.
- Debugged API failures, slow queries, and frontend regressions in live projects; kept deployments stable with no major incidents.

FABTRIP

Jun 2023 – Feb 2024

Software Developer

New Delhi, IN

- Built the customer-facing travel booking platform from scratch; shipped destination discovery, curated trip listings, and the full checkout flow to production.
- Owned the AI trip planner UI and destination pages end-to-end; introduced reusable responsive components that **cut build time for new pages significantly**.
- Identified and fixed performance bottlenecks and JS bugs across the booking funnel; **load reliability improved and drop-off at checkout reduced**.

PROJECTS

FENFO | Fence Estimation & Business Management SaaS | React.js, Node.js, Express, MySQL, Sentry | [🔗](#)

- **Map-Based Estimator:** Built the core estimation feature where contractors draw fence layouts directly on Google Maps; the app automatically calculates fence length, material quantities, post counts, and job pricing from the drawn geometry in real time, eliminating manual measurement.
- **Business Operations Suite:** Developed the full contractor workflow covering quote generation with auto-calculated line items, PDF export, invoice management, customer records, and order tracking, replacing spreadsheet-based processes for fencing businesses.
- **Auth & Subscriptions:** Integrated OAuth login, JWT-based session management, role-based access for contractor teams, and recurring subscription billing via Stripe, PayPal, Google Pay, and Apple Pay.
- **Error Monitoring:** Integrated Sentry for real-time error tracking and performance monitoring across the frontend and backend; set up alerts and release tracking to **catch and resolve production issues faster**.

Complex.so | Real-Time Chat & Collaboration Platform | React.js, Node.js, PostgreSQL, Docker | [🔗](#)

- **Real-Time Communication System:** Built a scalable real-time chat platform using React.js on the frontend and Node.js with Socket.IO on the backend, featuring instant messaging, typing indicators, online presence tracking, read receipts, and message timestamps for seamless live communication.
- **Scalable Frontend Architecture:** Designed a modular React.js component system with centralized state management, reusable UI patterns, and async data workflows to support efficient real-time data synchronization across the application.
- **Backend & Deployment:** Engineered Node.js/Express REST APIs with PostgreSQL schemas optimized for chat data, JWT-based authentication, and containerized deployment using Docker for consistent and scalable production environments.

Zembora | Ride & Rescue Platform | Node.js, Express, Firebase, Socket.IO, PostgreSQL

- **Real-Time Location & Communication:** Spearheaded a driver tracking system using Redis to cache live coordinates with batched PostgreSQL persistence every 30 seconds, significantly reducing database write load; integrated Socket.IO for ride events and Firebase Cloud Messaging for push notifications.
- **Dual-Flow Ride Engine:** Built a unified backend supporting both standard rides and vehicle rescue operations, including SOS emergency workflows routed directly to the admin panel for immediate response handling.
- **Live Ride Sharing:** Implemented ride-sharing functionality allowing users to share live tracking URLs with family and friends, displaying driver location, pickup, and destination details on interactive maps in real time.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Frontend: React.js, Next.js, HTML/CSS, SCSS, Tailwind CSS, Shadcn

Backend: Node.js, Express.js, Nest.js, RestApi, Socket.IO

BaaS & Platforms: Supabase, Firebase

Databases: PostgreSQL, MySQL, MongoDB, Redis

Developer Tools: Git, GitHub, Postman, Swagger, Sentry

Cloud & DevOps: Docker, GitHub Actions

EDUCATION

Maharshi Dayanand University

August 2019 – June 2023

Bachelor of Technology in Computer Science and Engineering | Percentage: 75.5%

Haryana, India
